

AI in the Sciences and Engineering

Siddhartha Mishra & Ben Moseley

1. Course Introduction
2. Introduction to Deep Learning Part 1
3. Introduction to Deep Learning Part 2
4. Importance of PDEs in Science
5. Physics-Informed Neural Networks -Introduction
6. Physics-Informed Neural Networks -Limitations and Extensions Part 1
7. Physics-Informed Neural Networks -Limitations and Extensions Part 2
8. Physics-Informed Neural Networks -Theory Part 1
9. Physics-Informed Neural Networks -Theory Part 2
10. Introduction to Operator Learning Part 1
11. Introduction to Operator Learning Part 2
12. Fourier Neural Operators
13. Spectral Neural Operators and Deep Operator Networks
14. Convolutional Neural Operators
15. Time-Dependent Neural Operators
16. Large-Scale Neural Operators
17. Attention as a Neural Operator
18. Windowed Attention and Scaling Laws
19. Introduction to Hybrid Workflows Part 1
20. Introduction to Hybrid Workflows Part 2
21. Neural Differential Equations
22. Introduction to Diffusion Models

23. [Introduction to JAX](#)
24. [Symbolic Regression and Model Discovery](#)
25. [Applications of AI in Chemistry and Biology Part 1](#)
26. [Applications of AI in Chemistry and Biology Part 2](#)
27. [Materials](#)

Supplementary Materials

1. [Neural ODEs A, B](#)
2. [Neural Tangent Kernel](#)
3. [Topic about Operator Learning](#)
4. [Kolmogorov-Arnold Networks A, B](#)

September 4, 2025
